

## Press release

### **Leadec takes on additional technical services at the BMW Group plant in Debrecen**

**Stuttgart, Germany/Debrecen, Hungary, March 18, 2026 – Leadec has expanded its services at the BMW Group plant in Debrecen since January 2026. The factory services specialist is taking on additional tasks in technical facility management and the maintenance of production-related equipment.**

Leadec has been active in Debrecen since 2023 and supported the construction of the plant until production began in September 2025. Since then, the company has been providing services to ensure stable production operations. The BMW iX3 is the first vehicle in the New Class to be produced in series at the plant. The Debrecen plant is also the BMW Group's first production site to operate entirely without fossil fuels.

#### **Technical services for high-tech production**

“The requirements for technical services are particularly high in this innovative production environment. We are therefore even more delighted that we were able to convince with our technical expertise and continue the trusting cooperation,” says Ferenc Dákai, Managing Director of Leadec Hungary.

The scope of services has been gradually expanded since 2023 – from infrastructural facility management and internal logistics to the technical cleaning of more than 150,000 square meters of production space with several hundred robots, as well as the takeover of technical facility management (TFM).

#### **Expanded contract for TFM and maintenance**

At the beginning of 2026, these services were expanded once again: 40 additional technical employees joined the 120-strong Leadec team on site. They work in the areas of logistics, assembly, pressing, laboratory, and car body construction and are responsible for technical equipment such as doors, gates, lighting, and power supply, among other things.

The maintenance of production-related systems, including gas pipes, ATEX exhaust air systems, conveyor technology, automated guided vehicles (AGVs), and welding technology, as well as spare parts logistics for the final assembly building, were also newly taken on.

### **Strong team for 24/7 operation at the Debrecen plant**

The services are provided in 24/7 shift operation, enabling the Leadec team to monitor the systems at all times and intervene immediately in the event of a malfunction. This allows synergies between the two areas of technical facility management and production maintenance to come into play.

Leadec Kft. has been present in Hungary since 1994. Today, the Hungarian market leader for industrial services employs more than 1,000 people and operates in 12 cities: Győr, Kecskemét, Szentgotthárd, Cegléd, Szeged, Makó, Szombathely, Debrecen, Budapest, Hatvan, Miskolc and Maklár.

## About Leadec

Leadec is the leading global service specialist for factories across their entire life cycle and related infrastructure. The company, headquartered in Stuttgart, Germany, generated sales of over €1.3 billion in 2024 with around 22,500 employees. Leadec supports its customers in more than 800 factories worldwide with over 60 years of experience along the entire production value chain.

Leadec's global services comprise: Install (Installation and Relocation), Automate (Automation & Commissioning, Production IT), Maintain (Production Equipment Maintenance and Technical Cleaning), Logistics (Value Added Services & Intralogistics), Support (Technical Facility Management and Infrastructural Facility Management), as well as other local services. The digital business platform Leadec.os offers an end-to-end solution which digitizes all service processes across systems.
